

The Linear Air Bar is extremely versatile, providing many different airflow options to accommodate high or low sidewall and ceiling placement, as well as both heating and cooling applications.

The Linear Air Bar includes an adjustable air gate controller that can be repositioned at any time after installation to change the direction of airflow or the length and size of the air pattern. See diagrams for gate controller placement and resulting airflow.

The same assembly allows return air volume adjustment for additional control of air migration. The air gate controllers can also be used to effectively “shut off” sections of the diffuser.

TYPICAL ASSEMBLY:
